Industrial Plant Labelling

PIPE MARKING

as per
ISO 20560

When it comes to labelling in harsh industrial environments there's no better option than our innovative and globally harmonized Pipe Marking solution as per ISO 20560.

With this standardized and systematic solution you have full visual control on your piping setup, increasing your production efficiency and work place safety alike. Thanks to the highly resistant, durable and state-of-the-art properties of material and print, wash outs and bleach outs are minimized, providing you with a long-lasting labelling solution.

Facts on ISO 20560 compliant Pipe Markings

- Harmonized ISO 20560 compliant solution, with globally recognizable symbols and colours
- Excellent, very long-lasting resistance against UV, harsh weather conditions (-30 ° to 110°), and a wide range of acid, alkaline and solvent substances thanks to high quality materials and production standards
- Visibility based, automated size formatting for letters and graphic elements provides for clearly defined layout configuration
- Highly resistant to abrasion, thanks to enormous adhesive power
- Our roll-glue approach ensures durable and long-life installation
- All required graphical elements (hazard, identification and contrast colour, flow arrows and GHS symbols) are arranged in a structured and systematic way on the product surface
- The Pipe Markings tapes are available in 3 width sizes (from 40 mm to 400 mm), precisely according to the technical pipe settings
- The required lengths of the Pipe Marking tapes will be calculated by the actual quantity demands
- Due to the mirrored layout, the flow direction arrows of the Pipe Markings always point in the right direction, reducing production excess and additional installation efforts
